The a-squared Emergency USB Stick: Plug it in, scan infected PCs and delete Malware!

Most users no longer work on a single computer. They switch from their desktop computer to a notebook or the PC of a colleague. When underway they use an Internet cafe or a hotel PC. Fortune favors those who have the a-squared Emergency USB Stick in their pocket when doing this. It can be quickly plugged into any computer in order to check for Malware infection and remove it immediately.

All computers look essentially the same from the outside. However, before a user starts working on a new PC, he or she is well advised to thoroughly check that it is "clean". Experts now recognize over one million damaging programs that can infiltrate a PC. It is better to play it safe. You can do this very easily with the new a-squared Emergency USB Stick.

The a-squared Emergency USB Stick (<http://www.emsisoft.com/en/software/stick/>) fits in any pocket or briefcase and is always available when you need to scan an unknown PC or clean an infected computer. The USB stick contains two a-squared programs that can be immediately used once the USB stick is plugged into the computer, without any additional software installation.

The emergency USB stick: a-squared Free as a Malware scanner

The first program on the USB stick is a-squared Free. This is a Windows scanner with a graphical user interface that helps to find Trojans, Spyware, Adware, Worms, Dialers, Keyloggers and other damaging software at the click of a mouse. Any damaging programs found by the software can then be immediately deleted or placed first in quarantine.

An alternative to a-squared Free is the a-squared Command Line Scanner, which does not use a graphical user interface and functions from a command prompt. Especially professional users like this variant because it can easily be integrated into batch file actions.

The stick also contains the latest test versions of a-squared Anti-Malware, a-squared Anti-Dialer, a-squared HiJackFree and Mamutu.

The emergency USB stick: 25 percent cheaper in a set

The a-squared Emergency USB Stick with both programs, the demos and a total capacity of 1 GB costs US \$20.00 (incl. sales tax and shipping). If you order the stick together with a full version of a-squared Anti-Malware or Mamutu, then the stick costs only US \$15.00 and you save 25 percent.

ABOUT EMSI SOFTWARE

Emsi Software is a private company based in Austria. The rapidly growing company has had a positive balance since its foundation in 2003 without external investment. Emsi Software aims to be a leading European provider of behavior analysis technology for analyzing software, especially Malware.

The company was founded in 2003 by Christian Mairoll, realizing his vision of a virtual company: The 15 company employees are distributed all over the world but work together as if they are sitting together in a real office. The technical vision is implemented by Georg Wicherski, who enjoys a high level of respect in the security sector as a co-founder of the "Nepenthes" Honeypot project and the mwcollect Alliance (an amalgamation of Honeypot networks for automated trapping of malignant software from the Internet).

The Emsi Software product range comprises the security programs a-squared Anti-Malware, a-squared Free, a-squared HiJackFree, a-squared Anti-Dialer and, since the end of 2007, Mamutu.
